

# Thickness Gauging & Control

Brückner works together with various leading gauge manufacturers in order to offer our customers the most suitable measurement solution for their special application.

Infrared, beta or x-ray: selecting the best fitting sensor technology for the given range of products.

Service and support out of one hand - beginning with installation throughout the entire lifetime of the system.

## System highlights

- High speed die lip control designed by Brückner
- Fast product changes
- ABA: Automatic Bolt Alignment
- Improved winding quality
- Integrated into IPC system
- Optional long-term roll data history (RDH)
- Gauge retrofits and upgrades
- Sustainable support with parts and service

## Advantages of an integrated system

- Use of existing IPC-system hard- and software (less parts and lower costs)
- Optimum control of Brückner die bolts
- Thickness data together with all other production data in one common database (reports and archiving)
- Service and support available out of one hand
